

I.S.O. Valves

Apollo Series;
Sizes 1, 2 & 3

Catalogue 2120GB-ca

I.S.O. Valves

A high quality, high performance range of spool valves, designed to conform to I.S.O. standard 5599/1 in respect of the basic sub-base foot print. This range covers I.S.O. sizes 1, 2 and 3, all available in 5/2 or 5/3 configurations.

This provides International flexibility for users, by ensuring all valves conforming to one of the standard's size categories will interface with any I.S.O. base also conforming to that same size category. In addition, the valves are also compatible with the European C.N.O.M.O. standards: 060512, size 2 are compatible with sub-bases conforming to C.N.O.M.O. 060501, and size 3 conform to C.N.O.M.O. 060502

All sizes offer a superb combination of advanced features. Special design attention has been afforded to spool and seal relationship. The lightweight aluminium spool is specially finished to give glass-like low friction wear resistant surface. The new static seals are a high fibre Nitrile composite material, so designed that they carefully caress the spool, producing the lowest friction and stiction combined with bubble-tight sealing.

The spacer shell stack is metal to metal, therefore no additional compression is transmitted to the seals. All bushes and pistons are of lightweight 'Acetal Resin' which has good low friction properties.

Actuators

Available with solenoid pilot, air pilot or hand lever actuators and with a choice of solenoid-pilot, air pilot, differential air pilot (air spring), spring or hand lever return mechanisms. Solenoid-pilot and differential pilot mechanisms have internal air supplies as standard, but may be field converted to external supply if required. An optional tell-tale / manual override is available on all actuator and return mechanisms.

Non-Lube Operation

All valves in the range may be used non-lube. Pre-lubricated during assembly, the combination of low friction spool and high quality seals enables them to be used with unlubricated air, but with the life expectancy of a standard pneumatic valve. The lightweight spool and seal assembly also enables the valves to be used in any plane from vertical to horizontal.

Solenoid-Pilot Actuators

On I.S.O. size 1 and 2 two distinct types of solenoid-pilot actuators are available: the C.N.O.M.O. recommended coil configuration has the coil assembly mounted horizontally on the valve with the solenoid armature operating along the same axis as the valve spool. The alternative version features the assembly mounted in an upright position with the armature operating at 90° to the spool.

The solenoid-pilots feature a low profile epoxy encapsulated 5 watt coil, with a built-on exhaust muffler and M5 threaded port. The cable plug connection is to I.S.O. 4400 and features a collet type cable lock.

Alternative 8 watt or 2,5 watt solenoid coils are available for special applications, consult Technical Sales Dept.

The coil and plug may be reorientated in 90° increments through 360° on the upright coils, on the C.N.O.M.O. configuration versions only the plug may be reorientated.

Sandwich Interface Function Plates

The Sandwich Flow Control plates allow fine adjustment of exhaust flows to provide accurate speed control of pneumatic cylinders.

Features

C.N.O.M.O. specification solenoids available on I.S.O. size 1 and 2. Fitted as standard on I.S.O. size 3

Epoxy encapsulated 5 watt coils with built on exhaust muffler and M5 threaded port. The simple plug-in connection is to I.S.O. 4400 and features a collet cable lock. Both plug and coil may be re-orientated through 360° in 90° increments, on upright solenoids

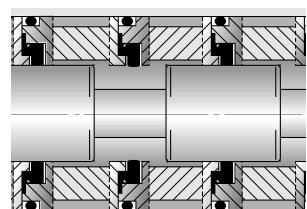

Aluminium spool assembly, specially finished to provide a glass like low friction, wear resistant surface.

Bushes and pistons are of acetal resin, a lightweight material with low friction properties.

- Over 700 variations can be assembled from just 18 sub-assemblies in each I.S.O. size
- Complies with I.S.O. standard 5599/1 and will interface with any other I.S.O. base and can be mounted onto a C.N.O.M.O. standard base.
- When used non-lube has the life expectancy of a standard pneumatic valve.
- Will operate with or without lubrication and in any plane from vertical to horizontal.

The special features that provide non-lube, long life characteristics.

Metal to metal shell stack

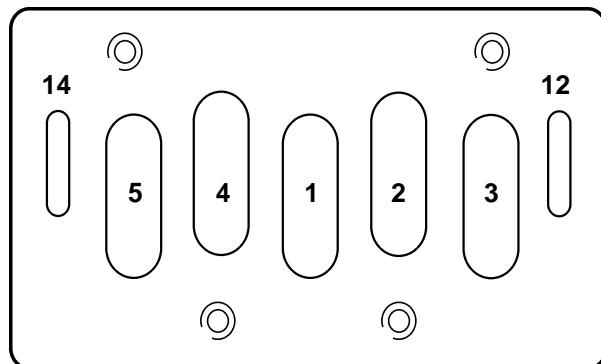

Composite seal with nitrile base, so designed that it carefully caresses the spool.

I.S.O. Valves

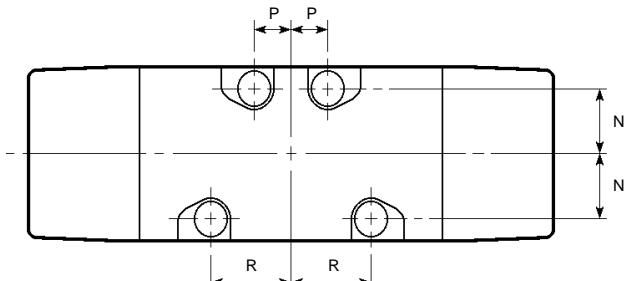

Standardised Dimensions: Valve to Sub-bases

Mounting surface dimensions conform to I.S.O. 5599/1.
Pneumatic fluid power - Five-port directional control
valves - mounting surfaces - Part 1: General

Port connections are numbered in accordance with
C.E.T.O.P. RP68P. On a standard 5/2 spring return
valve port connection 1 is the inlet and port 1 and 2 are
connected.

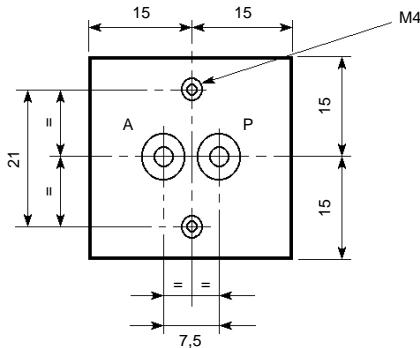

Valve body mounting hole dimensions

Pilot valve to main valve

Mounting surface dimensions conform to C.N.O.M.O.

Dimensions (mm)

| Standard | N | P | R | Mounting bolts |
|-------------------|----|----|----|----------------|
| I.S.O. Size 1 | 14 | 9 | 18 | M5 |
| C.N.O.M.O. 060512 | 13 | 9 | 18 | M4 |
| I.S.O. Size 2 | 19 | 12 | 24 | M6 |
| C.N.O.M.O. 060501 | 20 | 17 | 30 | M5 |
| I.S.O. Size 3 | 21 | 24 | 43 | M8 |
| C.N.O.M.O. 060502 | 21 | 24 | 43 | M5 |

Sub base port sized

| I.S.O. Valve Size | Nominal Size | Port sizes | (Sub bases) |
|----------------------|-----------------|---------------------------------|---|
| 1 | 1/4" | G ¹ / ₈ | G ¹ / ₄ - - |
| 2 | 3/8" | - G ¹ / ₄ | G ³ / ₈ G ¹ / ₂ |
| 3 | 1/2" | - - | G ¹ / ₂ G ³ / ₄ |

Note:

Valve to sub-base mounting bolts are included with each valve. These bolts should be tightened to 50 ibf ins. (7 Nm)

Technical Information

General

The side ported manifold sub-bases are supplied in kit form complete with a set of blanking plugs. One base is required per valve. Both cylinder and pilot ports are located in each end face of the base, the unwanted ports may be blanked off with the plugs supplied. Additional bases may be connected together, and are locked in position by two integral grub screws.

The end plate kit contains the two end plates both of which incorporate inlet and exhaust ports, and two pilot ports which may be used to pilot all the manifold valves.

simultaneously. A set of blanking plugs is supplied with I.S.O. 2 end plate kits to blank off the unwanted ports: on I.S.O. 1 kits a blanking plate is provided to place between the end plate and the first manifold base at whichever end requires blanking.

An additional facility on side ported bases are selector plates which may be assembled between bases to select which ports are required to be manifold connected.

Selector plate: Function

Blank Plate : On I.S.O. 1 manifolds this plate may be assembled between the end plate kit and first base to blank off one end or, to blank off inlet and exhaust between subsequent bases. On I.S.O. 2 manifolds blanking plugs are provided to blank off the unwanted end, the blank plate may be assembled between bases only. It may also be used anywhere in the complete manifold assembly, should it be necessary to supply or exhaust from both ends.

1, 3, 5 Open : This plate is supplied as standard with all manifold bases. Inlet and both exhaust ports open. Both pilot ports blanked.

| I.S.O. 2 | 29901 | 29905 |

The bottom ported manifold sub-bases are supplied in kit form with all the necessary seals and screws. One base is required per valve. The system is completely modular, further bases may be added by utilising the integral locking screws on each side of the base. The end plate kit containing the inlet and exhaust plates must be ordered separately. The inlet port is on one side and the exhaust ports are on the other.

Each valve in the manifold requires its own manifold block, which incorporates bottom entry G¹/₂ cylinder ports and side entry G¹/₈ pilot ports.

The end plate kit features, 3-off G1 side ports for inlet and exhaust facilities. The unwanted ports may be plugged.

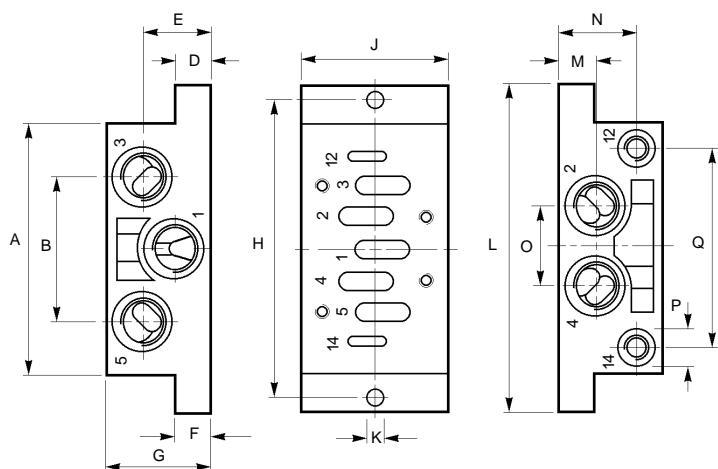

Assembly of manifolds is simple, each manifold is supplied complete with 'O' ring seals and 2 assembly bolts which locate into integral lugs on each manifold or end plate.

see page 23

Manifold Adaptor Plates I.S.O. Size 1, 2, 3 & 4

ISO Manifold Adaptor plates enable ISO VDMA manifolds of different sizes to be joined together, so that the manifold may be exactly tailored to suit the specific flow requirements of each part of an application.

A manifold may have ISO size 3 valves at one end, ISO size 2 valves in the middle, and ISO size 1 valves at the other end, all fed from the same inlet.

Part no.

| I.S.O. Size | Part no. |
|-------------|--------------|
| 1 to 2 | 19930 |
| 2 to 3 | 29930 |
| 3 to 4 | 39930 |
| 1 to 3 | 19931 |
